ELEC40006-Electronics Engineering Design Project 1 Deliverables Guidance

ELEC40006-Electronics Engineering Design Project 1 Deliverables Guidance 1
1. Participation Monitoring: 2
2. Assessment Calendar: 2
3. Assessment Components: 2
3.1. Interim Presentations: 2
3.2. Project Report Submission: 3
3.3. Reflection on professional practice: 3
3.4. Interview, Demo and Competition: 4
3.4.1. Schedule 4
3.4.2. Interview 4
3.4.3. Arena Demo 4
3.4.4. Hotspot 4
3.4.5. End of your Demo 4

This guidance document has been prepared to support you throughout the module by outlining key information about the project deliverables. It includes important details on weekly check-ins, interim presentations, reflections on professional practice, project report submission, and interview/demo assessment to help you navigate the module successfully.

1. Participation Monitoring:

This will be carried out through **weekly Check-In Forms**. The **Microsoft Forms** will be available every Friday 9am during the project and must be submitted by 7pm the following Monday. The forms will be available **in the ELEC40006 MS Teams channel as well**.

Week 1 Form - It will be available from 15th May 9am and must be completed by 18th May 7pm.

Week 2 Form - It will be available from 22nd May 9am and must be completed by 25th May 7pm.

Week 3 Form - It will be available from 29th May 9am and must be completed by 1st June 7pm.

Week 4 Form - It will be available from 5th June 9am and must be completed by 8th June 7pm.

2. Assessment Calendar:

Assessment	Date	Content	Weighting
Interim Presentation	28 May	A presentation with Q&A to exhibit your design so far	20%
Reflections on professional practice	11 June	Reflection on your professional development and how it relates to the project. Individual Reflection Form will be completed on Microsoft Forms.	0% (Must pass component)
Project report	11 June	A formal technical report detailing the design process and delivered technical solution	40%
Interview, Demo and Competition	16 June	Explain to the examiner how your EEELunar Rover works and answer their questions. Then compete head-to-head with other groups to complete the challenge in the quickest time	40%

3. Assessment Components:

3.1. Interim Presentations:

Interim Presentations will be on **28th May 2026** and **its timetable** will be shared in the **ELEC40006 MS Teams channel**. If your group would like to practice your presentation, a lecture room might be booked for 30–45 minutes upon request, normally one day before the scheduled presentations (27th May 2026).

Each group will be given a **20-min time slot**. Please prepare a **15-min presentation** and allow **5 mins for a Q&A session** at the end.

Your presentations should discuss (a) your current progress and (b) outline future plans.

For (a) you should include the following

- your project plan,
- task definitions and allocations,
- current progress on the project,
- You might include a short demo or video of the working parts of your rover and its circuitry (optional).

For (b) you should include the following

- project timeline (e.g. a Gantt Chart)
- the solution ideas, approaches, methods for the remaining work.

3.2. Project Report Submission:

The project report should be no longer than **10,000 words** and submitted **via MS Teams** by **17:00PM on 11th June 2026**. A 10-minute grace period (until 17:10PM) will be allowed for any IT issues during submission, still please avoid leaving the submission to the last minute. Submissions after 17:10PM will be considered as late submissions. Only one person needs to submit the report on behalf of the group. If multiple submissions are made, the final submission will be considered. The report must be in **PDF format**, and the file name should follow the format: **ELEC40006-Project_Report_Group_[Group Number],** e.g. ELEC40006-Project_Report_Group_40. **The cover page must include the names of all group members, CIDs and the word count of the report.** You should share your project's GitHub repository with your marker, so they can see your codes, designs and other project documents. You will know your markers and their GitHub username before this.

3.3. Reflection on professional practice:

Reflection on your professional development and how it relates to the project. Each group member must complete the **Reflection on Professional Practice Form** individually. **The form template** is available **in the ELEC40006 MS Teams channel**. Please download the form template, and complete it. All completed forms from group members should be compiled and attached to the end of your group project report, then submitted together **by 17:00PM on 11 June 2026.**

3.4. Interview, Demo and Competition:

3.4.1. Schedule

Interview/demo timetable will be shared in the **ELEC40006 MS Teams channel.** Benches will be signposted according to the marker names, and you can arrive up to 10 minutes early to set up. Do not come to the lab outside of your interview and demo time, please, because we want to minimise the load on the WiFi networks.

3.4.2. Interview

First, you will be interviewed as a group at your allocated bench. The examiner will lead the interview, and you should not prepare a presentation. They will ask you questions about different aspects of the project. Prepare by having circuit diagrams, test results and codes ready to show, along with your functional rover and UI. You may be asked to demonstrate the operation of circuits by viewing signals on an oscilloscope. Please allow everyone in the group to explain the parts they are most familiar with. If you are uncertain about the reliability of your rover you may wish to record videos of it working, in case there are problems during the demo. **The interview lasts for 20 minutes.**

3.4.3. Arena Demo

After the interview, at the given demo time, place your rover in your allocated corner of the demo arena (A, B or C) and wait for the start instruction. Three groups will be competing head-to-head to identify the ducks the quickest. Deliberate collisions or blocking will be penalised. Enter the name, position and species of each rock onto the web form, which will be provided on the day. Submit the form as soon as you have the information from all the rocks so that the submission time can be used to calculate the elapsed time of your demo run. A ranking of time and accuracy will be published when the demos are complete, but this ranking will form only a small part of the project marking. **You should complete the demo section within a maximum of 10 minutes.**

3.4.4. Hotspot

You can use your mobile phone's hotspot, however; a router will be set up to provide local network access as well. The router will not have internet access, and it might have high latency and delay due to the load.

3.4.5. End of your Demo

- Please leave your rovers on the allocated bench for your group after completing your demo. You will see the group labels on the bench where you have your interview. If your rover chassis does not have an identifier showing your group number, it is good idea to place a label showing the group number on the rover chassis.
- Please also return your Lab-in-the-Box kits to the Lab shelves as well.
